

IN THE ABSTRACT:

Please amend the abstract as follows:

The present invention provides a calibration method used in an image-capture apparatus. The method comprises providing a calibration chart not built in the image-capture apparatus. Users can select any kind of calibration chart by themselves. The calibration chart consists of pixels arranged in a two-dimensional array, which can prevent dark lines on the output of a scanned article. The information of the calibration chart is captured by the image-capture apparatus and then subjected to a correction ~~means~~, such as by a low-pass filter, whereby corrects aberrance of the information.
